Abstract

With the used water kept in the reservoir(15) attached to the washer, it can be used in the next washing. The recycle button is chosen in the control panel and start up is selected. The supply pump(17) fixed in the 1st supply hose(18) is turned on by the microcomputer, the water stored in the reservoir(15) flows in the 1st supply hose(18) and flows into the 2nd supply hose(19) installed in the main body to fill the washing tub(5) and therefore, the recycle of washing water is possible.
